Michaelamay1@yahoo.com | 312.358.8120 | 89 Kingston Ave Apt 3L Brooklyn, NY, 11213

Summary - Award-winning software engineer with years building high-scale, reliable systems across fintech, health insurance, and logistics; consistently shipped high-impact solutions; holds 11+ IT certifications.

Professional Experience (Michaelamay.com/companies)

AI Expert, Snorkel AI November 28, 2025 - Present

- Built and evaluated LLM-powered workflow agents in Python using LangChain, OpenAI API, Claude, and RAG pipelines to automate complex multi-step business process across enterprise use cases.
- Developed evaluation and data-quality workflows using Snorkel Flow, Snorkel Evaluate, labeling functions, deterministic graders, LLM-as-judge, pytest, Docker, and benchmark datasets to validate agent reliability and task completion.
- Integrated AI agents with internal APIs, Salesforce, Slack, PostgreSQL, MongoDB, Redis, Jenkins, Kubernetes, and LaunchDarkly to support workflow state, human-in-the-loop escalation, auditability, CI/CD, and staged production rollout.

Relevant Tools Used: Python, Codex, Scripting, Dev Ops, Command Line, Docker Containers, VS, GPT, Claude, LangChain, AirTable, Cursor, OpenAI, Slack, Salesforce, Jenkins, Kubernetes.

Software Engineer, Echo Global Logistics July 12, 2024 – September 12, 2025

- Utilized Java and C# to develop and enhance a shipment tracking system, translating mathematical optimization models into scalable backend solutions that improved transportation routing efficiency, reduced delivery delays and fuel costs, and increasing order fulfillment accuracy.
- Developed backend integrations connecting Echo's EchoShip and EchoDrive applications with external carrier APIs; implemented RESTful APIs and microservices using Spring Boot to support logistics workflow; worked in Postman for testing web services and automating dozens of API test cases improving API reliability and fixing bugs prior to release.
- Designed and supported AWS cloud environments streamlining Echo's transportation management system operations, including a serverless microservices where freight data enters through API Gateway, triggers Lambda functions, and stores results in a database.
- Wrote SQL and NoSQL database queries, implementing MongoDB collections, inner joins, and scalable schema design to improve shipment tracking data retrieval performance and load planning.

Relevant Tools Used: Java, C#, Amazon Simple Notification Service (SNS), microservices, Kafka, RabbitMQ, testing suites, Docker, Kubernetes, CI/CD, SQL, relational databases, non-relational databases, APIs, multithreading, AI Libraries, Jenkins, Elasticsearch, publish-subscribe architecture, event-driven systems.

Software Engineer, Fidelity National Information Services March 14, 2022 – March 13, 2024

- Developed and implemented microservices in Java for a Profit and Loss (PnL) calculation system and automated trading procedures, including EFT spread trading and price trend analysis across capital and financial markets, enabling improved portfolio strategy recommendations for financial institutions; and maintained trading and risk management systems for multiple asset classes including derivatives, FX, credit, commodities, and equities, ensuring data accuracy and reliability.
- Developed UI components using Angular, TypeScript, HTML, and JavaScript for the InvestOne enterprise application by FIS used by global financial institutions including JPMorgan Chase, Citigroup, Wells Fargo, Bank of America, and Northern Trust.
- Built backend components for financial applications by writing efficient SQL queries with inner joins, creating stored procedures, and integrating with Hibernate ORM to persist and retrieve complex portfolio and transaction data.
- Collaborated with QA, Business, Product Owners, and engineering teams across multiple time zones to translate business requirements into technical solutions and troubleshoot applications; participated in Agile/Scrum ceremonies including sprint planning, code reviews, and backlog grooming.

Relevant Tools Used: Java, Spring Boot, microservices, asynchronous event-driven workflows, Kafka, RabbitMQ, relational SQL database, Docker, AWS EC2, AWS RDS, Kubernetes, CI/CD pipelines, unit testing, deployments, Git, multithreading strategies.

Automation Programmer, BlueCross BlueShield of IL, MT, NM, OK & TX July 15, 2019 – March 7, 2022

- Designed and implemented microservices in C# for an Open Enrollment Automation platform developed to streamline member enrollment, and healthcare document processing workflows. Utilized Python and OCR technology to automated data extraction from uploaded insurance forms. Integrated AI/ML models to classify documents. Leveraged Azure services to support backend automation workflows and CI/CD deployments.
- Implemented TDD-driven unit testing for functional and regression test suites, executed UAT in Azure to validate business requirements, and authored documentation for architecture, APIs, and workflows.

Relevant Tools Used: Python, C#, microservices, distributed systems, automation, OCR, AI/ML, SQL, RESTful APIs.

Selected Independent Projects

Taskable AI App (https://taskable.fly.dev)

- Built a Java Spring REST API with CRUD task management and Claude AI integration for task suggestion, summarization, & breakdown.

Employee System (https://employeesystem.online)

- Built Spring Boot REST API for employee registration with H2 database & created a Visual Studio frontend UI for user interaction.

Certifications (Michaelamay.com/certifications)

Fundamental Cloud Concepts for AWS; Docker & Kubernetes; Agile Project Management with Jira; API Testing Foundations; Learning Jenkins; Angular; Neural Networks and Deep Learning; Agile Foundations; Learn Online Store Responsive Website Design HTML/CSS

Awards (Michaelamay.com/awards)

Best Use of Machine Learning Category, Yale University Annual Hackathon

Led a 4-member team in designing and building a Remote Desktop solution that improved efficiency by leveraging machine learning, Python, and Google Tesseract OCR.

Education

DePaul University, Bachelor of Science in Computer Science and Minor Information Technology Chicago, IL
