Summary-

Award winning, 11+ IT certifications, and full-stack software engineer with 5+ years of professional experience with major corporations across 3 different industries including: health insurance, fintech, & logistics.

Professional Experience

Software Engineer Support, [Echo Global Logistics](#)

July 2024 – September 2025

Hybrid - Chicago, IL

Wrote Java 21 & C# code for a shipment tracking system, translating mathematical optimization models into code to improve transportation routing; maintained and enhanced a real-time inventory tracking system, reducing delivery delays and improving order fulfillment accuracy across Echo’s distribution network.

Developed backend integrations connecting Echo’s EchoShip and EchoDrive applications with external carrier APIs; implemented RESTful APIs and microservices using Spring Boot to support logistics workflow; worked in Postman for testing web services and automating dozens of API test cases improving API reliability and fixing bugs prior to release.

Implemented and managed AWS cloud environments supporting system operations, including serverless microservices with AWS Lambda; processed freight data via API Gateway; built and maintained CI/CD pipelines using AWS CodePipeline and Jenkins to streamline TMS feature delivery & deployment.

Software Engineer, [Fidelity Information Services](#)

March 2022 – March 2024

Remote

Developed Java applications in Eclipse to automate trading procedures, including EFT spread trading and price trend analysis across capital and financial markets, enabling improved portfolio strategy recommendations for financial institutions; and maintained trading and risk management systems for multiple asset classes including derivatives, FX, credit, commodities, and equities, ensuring data accuracy and reliability.

Developed UI components using Angular, TypeScript, HTML, CSS, and JavaScript for the InvestOne enterprise application by FIS used by global financial institutions including JPMorgan Chase, Citigroup, Wells Fargo, Bank of America, and Northern Trust.

Developed multithreaded Java services for transaction processing and reporting (improving efficiency by 30%), migrated monolithic systems to RESTful microservices using Spring, and deployed enterprise applications on Apache Tomcat with automated CI/CD pipelines via Jenkins.

Built backend components for financial applications by writing efficient SQL queries with inner joins, creating stored procedures, and integrating with Hibernate ORM to persist and retrieve complex portfolio and transaction data.

Collaborated with QA, Business Analyst, Product Owners, Scrum Masters, and engineering teams across multiple time zones to translate business requirements into technical solutions, design data models, and troubleshoot applications; participated in Agile/Scrum ceremonies including sprints, code reviews, daily stand-ups, backlog grooming, and process improvement initiatives.

Automation Programmer, [BlueCross BlueShield of IL, MT, NM, OK & TX](#)

July 2019 – March 2022

Hybrid - Chicago, IL

Refactored legacy C# code and implemented feature enhancements in Visual Studio for BlueCross BlueShield’s healthcare quoting platforms serving millions of customers during the November – January open enrollment period.

Developed automation scripting solutions in Python, UiPath, and Visual Basics, automating 15+ manual workflows and performing bot testing with structured test datasets before production deployment, improving business efficiency; configured those automated cloud-based deployment with Azure Dev Ops.

Implemented Test-Driven Development (TDD) using unit test to build automated functional and regression test suites, conducted Acceptance Testing (UAT) on Azure to verify functionality against business requirements, and developed technical documentation for system architecture, APIs, and workflows, enhancing collaboration across engineering, QA, and operation teams.

Selected Independent Project (www.employeesystem.online)

Employee System

Build a RESTful API employee registration webservice application using Spring. Used HTTP methods: POST, DELETE, UPDATE, and GET to interact with a h2 database; implemented UI on Visual Studios using front-end tools like Model View Controller, HTML, XML, CSS, JavaScript, JSP, and for the back end- Java 20.

Certifications (<https://michaelamay.com/certifications>)

 Fundamental Cloud Concepts for AWS

 Agile Project Management with Jira

 Learning Jenkins

 Docker and Kubernetes

 API Testing Foundations

 Angular

Awards (<https://github.com/AWoLnik/Skeleton>)

Best Use of Machine Learning Category, Yale Annual Hackathon

Yale University – New Haven, CT

Part of a 4-member team that build an app in 36 hours using Java, YOLO, and Google’s Tesseract OCR to identify UI elements on screen, pull texts from screen frames and transmit via JSON remote agents’ desktop.

Education

DePaul University, Bachelor of Science in Computer Science and Minor Information Technology

Chicago, Illinois
